

J. W. MARRIOTT

orlando, florida

GFRC

The JW Marriott at Grande Lakes is a 1,000-room hotel that sits in one of the country's most luxurious resorts. Surrounded by eco-tours, fly fishing and nearby world class attractions, this is a family's vacation paradise. The construction of the hotel was completed in 2002.

The hotel is crowned by a large classical cupola that identifies the structure immediately from far away. Stromberg manufactured the majestic cupola as we have been producing cupolas for over 30 years, in a wide range of sizes for structures built at every scale imaginable; from towering resorts like the Marriott all the way down to private residences.

The Stromberg cupola was manufactured from our Glass Fiber Reinforced Concrete (GFRC).
